Major Avalanche Path
This overlay is intended for self-directed backcountry recreational trip planning purposes only, and is not suitable for operational risk assessment or facility location planning. it should be interpreted at a scale no smaller than slope-scale (25-100 m) and not be used as a route-finding aid. The avalanche path and avalanche exposure polygons are based on maps, imagery, digital modeling, and broad scope field interpretation during the winter of 2011-12. Any subsequent artificial or natural alteration of the landscape or terrain may change the nature of the avalanche exposure.
